DATA ACCESS

After registration, you will be able to download our data. To assist you, our HelpCenter is available, and more specifically its section about download.

Information on operational issues on products and services can be found on our User Notification Service. If needed, you can contact us .

1) INTRODUCTION

a) Summary

This document is the user manual for the Copernicus Marine Service Ocean Monitoring Indicator (OMI) OMI_HEALTH_TEMPSALOXY_BALTIC_cod_volume. It contains one dataset:

- omi_health_tempsaloxy_baltic_cod_volume

The OMI provides a timeseries of cod reproductive volumes which contains timeseries of cod reproductive volumes calculated from daily salinity, temperature and oxygen fields of Copernicus Marine Service reanalysis products BALTICSEA_MULTIYEAR_PHY_003_011 and BALTICSEA_MULTIYEAR_BGC_003_012.

The product is published on the Copernicus Marine Service dissemination server after automatic and delayed-mode quality controls. The product is available online and disseminated through the Copernicus Marine Service Information System. Files downloaded are in NetCDF format and follow CF-1.7 convention.

Disclaimer: The quality of the product may vary during the proposed time series depending on the possible update of the system.

The OMI is further described in the corresponding Quality Information Document (QUID).

2) DESCRIPTION OF THE PRODUCT SPECIFICATION

a) General Information

Product Lines	OMI_HEALTH_TEMPSALOXY_BALTIC_cod_volume
Geographical coverage	Baltic Sea
Variables	cod reproductive volume
Available time series	From 1993 to Month-4
Temporal resolution	Daily
Horizontal resolution	Integrated
Integration depth (for example)	0 – 700m
Format	NetCDF4

b) Production System Description

The cod reproductive volumes been calculated using the results from Copernicus Marine Service BALMFC Reanalysis products BALTICSEA_MULTIYEAR_PHY_003_011 and BALTICSEA_MULTIYEAR_BGC_003_012. The daily volumes are calculated as the volumes of the water with salinity > 11 g/kg, oxygen content > 2 ml/l and water temperature over 1.5°C in the Baltic Sea International Council for the Exploration of the Sea subdivisions of 25-28 (ICES, 2019).

ICES, 2019. Baltic Sea Ecoregion – Fisheries overview, ICES Advice, DOI:10.17895/ices.advice.5566

c) Dataset details

omi_health_tempsaloxy_baltic_cod_volume contains timeseries of cod reproductive volume calculated from daily salinity, temperature and oxygen reanalysis fields
crv [km3] Timeseries of cod reproductive volume calculated from daily salinity, temperature and oxygen reanalysis fields long_name: Cod reproductive volume standard_name: sea_water_volume **time [days since 1950-01-01 00:00:00]** long_name: time standard_name: time

3) FILE FORMAT

The products are stored using the NetCDF format.

To know more about the NetCDF format, please follow this link:
What is the format of Copernicus Marine products ? NetCDF

To understand the differences between netCDF and Zarr, please consult this article:
how-to-choose-between-netcdf-and-zarr-format-using-the-toolbox

4) FILES NOMENCLATURE

Information about nomenclature of files when downloaded can be found in this article: " How is defined the nomenclature of Copernicus Marine data? | Copernicus Marine Help Center "

Files nomenclature when using the get command in the Copernicus Marine Toolbox or using the Browse File is as follows:

<datasetname>_P<productiondate>.nc

Where :
<datasetname> is the dataset reference
<productiondate> is the production date when the file was generated
.nc is the standard NetCDF filename extension.
