DATA ACCESS

After registration, you will be able to download our data. To assist you, our HelpCenter is available, and more specifically its section about download.

Information on operational issues on products and services can be found on our User Notification Service. If needed, you can contact us .

I INTRODUCTION

I.1. Summary

This document is the user manual for the Copernicus Marine Service Ocean Monitoring Indicator (OMI) OMI_CLIMATE_OSC_MEDSEA_volume_mean. It provides a time series of Ocean Salt Content (OSC) volume averaged over the Mediterranean Sea (30°N, 46°N; 6°W, 36°E), between 0 and 300 meters depth, excluding regions where the seafloor is shallower than 300 meters (see the QUID document for more details on the calculation method).

The product consists of a one-dimensional (time) dataset with annual mean of OSC, computed from a combination of reanalysis and observational products: MEDREA[1], CGLOR, ORAS, FOAM reanalysis (from the GREP[2] ensemble), and CORA5.2[3] and ARMOR3D[4] observational salinity data.

The time series begins in 1993 and, for each product, all available data is used, resulting in a varying time coverage. Consequently, the ensemble is calculated over the time period common to all products, extending at least up to three years prior to the current year [−3Y] (or closer to the present, depending on data availability), and it is extended operationally on an annual basis. For the MEDREA, both reanalysis and interim data are used, thus the index is calculated up to the year preceding the current one [-1Y].

The product is published on the Copernicus Marine Service dissemination server after automatic and delayed-mode quality controls. The product is available online and disseminated through the Copernicus Marine Service Information System. Files downloaded are in NetCDF format and follow CF-1.7 convention.

Disclaimer: The quality of the product may vary during the proposed time series depending on the possible update of the system.

I.2. History of changes

2023/06	First delivery of the OMI OMI_CLIMATE_OSC_MEDSEA_volume_mean
2025/05	Temporal extension and Setup of operational extension

II DESCRIPTION OF THE PRODUCT

II.1. General information

Product name	OMI_CLIMATE_OSC_MEDSEA_volume_mean
Geographical coverage	30°N, 46°N; 6°W, 36°E
Variables	Ocean Salt Content (OSC)
Update frequency	Annual
Available time series	Ensemble -> from 1993 up to at least three years before the current year [-3Y] (or closer to the present, depending on data availability) MEDREA -> from 1993 up to one year before the current year [-1Y]
Delivery mechanism	MDS
Temporal and Spatial resolutions	Annual averages 1/24 degrees
Integration depth	0-300 m, excluded regions shallower than 300 m
Format	NetCDF CF1.7

II.2. Details of the dataset

omi_climate_osc_medsea_volume_mean dataset contains the following variables:
OSC_mean [PSU] long_name: "Ensemble Mean of Volume Averaged Ocean Salt Content" standard_name: "integral_wrt_depth_of_sea_water_salinity_expressed_as_salt_content"
OSC_std [PSU] long_name: "Ensemble Standard Deviation of Volume Averaged Ocean Salt Content" standard_name: "integral_wrt_depth_of_sea_water_salinity_expressed_as_salt_content"
OSC_glor [PSU] long_name: "Volume Averaged Ocean Salt Content from GLORYS2V4 Sea Water Salinity" standard_name: "integral_wrt_depth_of_sea_water_salinity_expressed_as_salt_content"
OSC_cglo [PSU] long_name: "Volume Averaged Ocean Salt Content from C-GLORS05 Sea Water Salinity" standard_name: "integral_wrt_depth_of_sea_water_salinity_expressed_as_salt_content"
OSC_oras [PSU] long_name: "Volume Averaged Ocean Salt Content from ORAS5 Sea Water Salinity" standard_name: "integral_wrt_depth_of_sea_water_salinity_expressed_as_salt_content"
OSC_foam [PSU] long_name: "Volume Averaged Ocean Salt Content from FOAM/GloSea Sea Water Salinity" standard_name: "integral_wrt_depth_of_sea_water_salinity_expressed_as_salt_content"
OSC_cora [PSU] long_name: "Volume Averaged Ocean Salt Content from CORA5.2 Sea Water Salinity" standard_name: "integral_wrt_depth_of_sea_water_salinity_expressed_as_salt_content"
OSC_armor [PSU] long_name: "Volume Averaged Ocean Salt Content from ARMOR-3D Sea Water Salinity" standard_name: "integral_wrt_depth_of_sea_water_salinity_expressed_as_salt_content"
OSC_med [PSU] long_name: "Volume Averaged Ocean Salt Content from MEDREA24 Sea Water Salinity" standard_name: "integral_wrt_depth_of_sea_water_salinity_expressed_as_salt_content"

II.3. Product System Description

Data extracted from MEDREA and GREP reanalysis[5] or observations[6] provide the salinity which is used to compute the series of OSC mean. The annual mean time series start on 1993, with each yearly mean centred on the 30th of June. This product includes annual mean files of OSC temporal series for the Mediterranean Sea (30°N, 46°N; 6°W, 36°E). These averages are calculated from upper 300m depth.

III FILES NOMENCLATURE AND FORMAT

Information about nomenclature of files when downloaded can be found in this article: " How is defined the nomenclature of Copernicus Marine data? | Copernicus Marine Help Center "

III.1. Nomenclature of files

OMI_CLIMATE_OSC_MEDSEA_volume_mean files nomenclature when downloaded through the CMEMS Services is based on the following nomenclature:

<datasetname.nc

Where :

- **<datasetname>** is the dataset reference**.**
- **.nc** is the standard NetCDF filename extension.

For example: omi_climate_osc_medsea_volume_mean.nc

III.2. File Format

The products are stored using the NetCDF format.

To know more about the NetCDF format, please follow this link: What is the format of Copernicus Marine products ? NetCDF

To understand the differences between netCDF and Zarr, please consult this article: how-to-choose-between-netcdf-and-zarr-format-using-the-toolbox
