GLOSSARY AND ABBREVIATIONS

CMEMS	Copernicus Marine Environment Monitoring Service
MOI	Mercator Ocean International
NetCDF	Network Common Data Form
OMI	Ocean Monitoring Indicator
PUM	Product User Manual
QUID	Quality Information Document
OC	Ocean Colour
BAL	Baltic Sea

DATA ACCESS

After registration, you will be able to download our data. To assist you, our HelpCenter is available, and more specifically its section about download.

Information on operational issues on products and services can be found on our User Notification Service. If needed, you can contact us .

INTRODUCTION

a) Summary

This document is the user manual for the Copernicus Marine Ocean Monitoring Indicator (OMI). It provides 1D (time) time series of bloom coverage for the period 1998-2024 for the Baltic Sea.

The document refers to these products:

OMI_HEALTH_BLOOM_BALTIC_spatiotemporal_coverage

These data are computed using MY (OCEANCOLOUR_BAL_BGC_L3_MY_009_133) data which provide chlorophyll concentrations from satellite observations. The products are published on the CMEMS dissemination server after automatic and delayed-mode quality controls. The products are available online and disseminated through the CMEMS Information System. Files downloaded are in NetCDF format and follow CF-1.7 convention.
MY data are described in detail in the corresponding Quality Information Document (QUID): CMEMS-OC-QUID-009-131to134.pdf (copernicus.eu).

OMI products are detailed in the corresponding Quality Information Documents (QUID): https://catalogue.marine.copernicus.eu/documents/QUID/CMEMS-OMI-QUID-HEALTH-BLOOM-BALTIC-OCEANCOLOUR.pdf

DESCRIPTION OF THE PRODUCT SPECIFICATION

a) General Information

Product Lines	OMI_HEALTH_BLOOM_BALTIC_spatiotemporal_coverage
Geographical coverage	BAL (53.25°-65.85°N, 9.25°-30°E)
Variables	annual spatiotemporal coverage for subsurface blooms over time annual spatiotemporal coverage for surface blooms over time annual spatiotemporal coverage for co-occurring subsurface and surface blooms over time
Available time series	From 1998 to year -1
Temporal resolution	Annual time series
Horizontal resolution	N/A
Integration depth (for example)	N/A
Format	NetCDF4 C1.4

b) Production System Description

Ocean Colour Bloom Annual Time Series
The cyanobacteria summer bloom mask variable (CYANOBLOOM) in the MY (OCEANCOLOUR_BAL_BGC_L3_MY_009_133) regional chlorophyll dataset data are used to compute the annual time series of spatiotemporal coverage for three bloom classes (subsurface, surface, and both subsurface and surface summer blooms detected)

c) Dataset details

omi_health_bloom_baltic_spatiotemporal_coverage contains the 1D Baltic Sea summer bloom coverage time series
SUBSURFACE_BLOOMS [day km2] annual spatiotemporal coverage for subsurface blooms over time spatiotemporal_coverage **SURFACE_BLOOMS [day km^2]** annual spatiotemporal coverage for surface blooms over time spatiotemporal_coverage **BOTH_BLOOMS [day km2]** annual spatiotemporal coverage for co-occurring subsurface and surface blooms over time spatiotemporal_coverage

FILE FORMAT

The products are stored using the NetCDF format.

To know more about the NetCDF format, please follow this link:
What is the format of Copernicus Marine products ? NetCDF

To understand the differences between netCDF and Zarr, please consult this article:
how-to-choose-between-netcdf-and-zarr-format-using-the-toolbox

FILES NOMENCLATURE

Information about nomenclature of files when downloaded can be found in this article: " How is defined the nomenclature of Copernicus Marine data? | Copernicus Marine Help Center "
