RECORD TABLE

When the quality of the products changes, the QuID is updated and a row is added to this table. The third column specifies which sections or sub-sections have been updated. The fourth column should mention the version of the product to which the change applies.

Issue	Date	§	Description of Change	Author	Validated By
1.0	2018/01/23	All	Creation of the document	Gilles Garric

I INTRODUCTION

I.1 Product name

ANTARCTIC_OMI_SI_extent

I.2 Indicator evaluation method

Sea ice extent is defined here as the measurement of the area of the ocean covered at least by 15% of sea ice. Monthly mean (1993-2014) seasonal cycle time series of total area for sea ice extent are calculated for the southern hemisphere, e.g. Antarctica. Total area annual mean time series 1993-2023 for sea ice extent are calculated for the same domain. Sea Ice Extent is expressed here in millions of km².

I.3 CMEMS products used as input for the computations

Product name (and Type)	Documentation
GLOBAL_MULTIYEAR_PHY_ENS_001_031	QUID : CMEMS-GLO-QUID-001-031.pdf PUM:CMEMS-GLO-PUM-001-031.pdf (copernicus.eu)

II SCIENTIFIC VALIDATION

More details and full scientific evaluation can be found in the CMEMS Ocean State Report (Samuelsen et al., 2016; Samuelsen et al., 2018).

The quality evaluation of ANTARCTIC_OMI_SI_extent is based on the "multi-product" approach as introduced in the second issue of the Ocean State Report (CMEMS OSR, 2017). Five global products have been used to build the ensemble mean, and its associated ensemble spread (Figure 1, dark red line and blue shaded area). Results of Fig. 1 indicate how different products compare to each other in view of their mean seasonal cycle and their interannual variability, e.g. annual means.

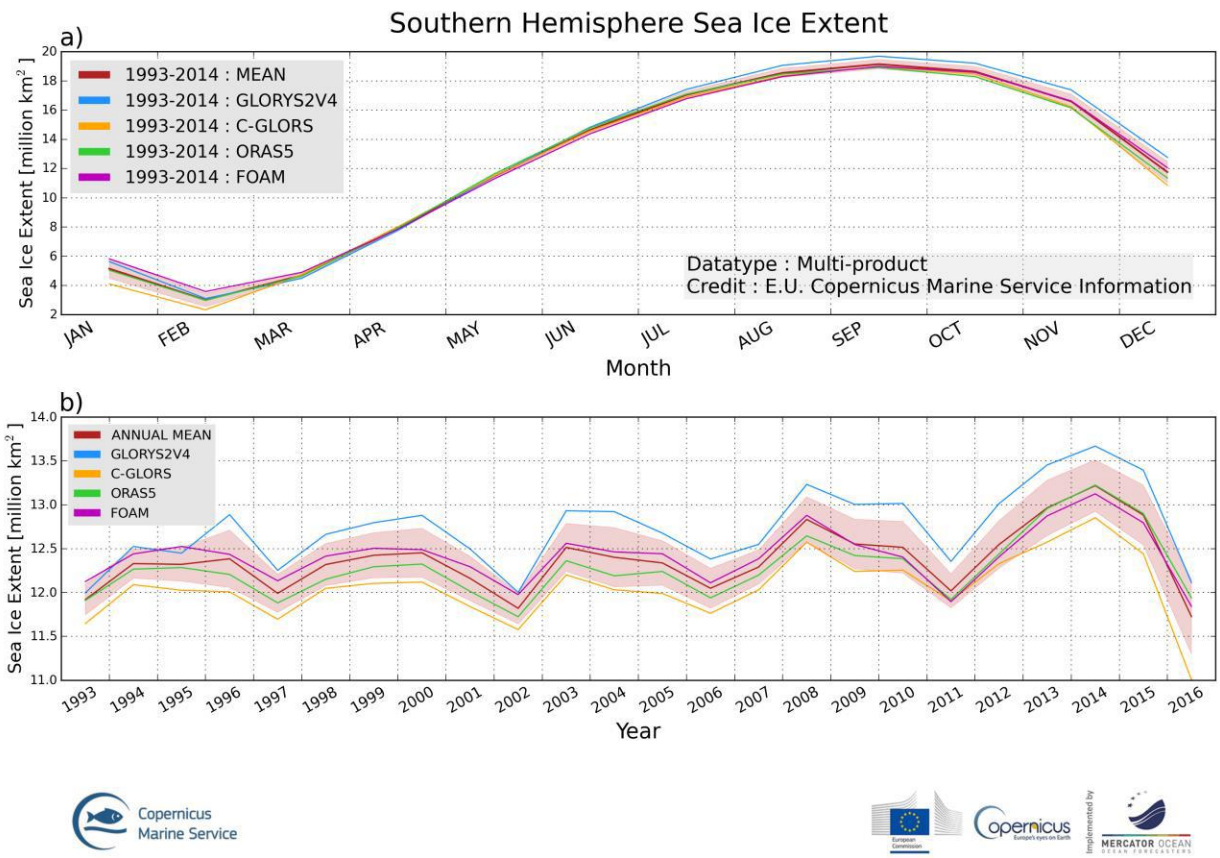

Figure 1: Antarctica sea ice extent of seasonal means (top panel) and annual mean (bottom panel). Units are in millions of km2. Time series are based on different data products, i.e. global ocean reanalysis GLORYS (blue), C-GLORS (orange), ORAS5 (green), FOAM (purple) and the ensemble mean (red) and the ensemble spread (light blue). Details on the products are given in the corresponding PUM for this OMI.
